

## No Air Loss Adaptor Instructions

1. Thread the brass end of the No Air Loss Adaptor onto the pump hose.
2. Thread the No Air Loss Adaptor onto Schrader fitting.
3. Fill fork, shock, tire, etc. to the desired pressure setting.
4. Unthread the No Air Loss Adaptor from Schrader fitting.

**Note**-Any air sound you may hear when disconnecting is pressure escaping from pump and hose volume only. In addition, there will be a slight drop in pressure when re-connecting due to the additional volume of pump and hose.
